REPORT OF POTABILITY

COLIFORM TEST RESULTS

This potability sample **PASSES**

Date: May 26, 2010

Lab ID Number: ME007-095

Client: Buffalo Owners Association

Property Address: Buffalo Owners Association "Lone Tree Spring", Como CO

Date & Time [Location] Collected: May 24, 2010 @ 1135 [Lone Tree Spring]

<u>Bacteriological Test</u>	<u>Results</u>	<u>EPA Primary Maximum Contaminant Level</u>	<u>Acceptable</u>
Total Coliforms per 100 mls:	Absent	Absent	Yes
Fecal Coliforms per 100 mls	Absent	Absent	Yes

Coliform bacteria, while relatively harmless themselves, are almost always present in water containing enteric (relating to the intestines) pathogens. Because they are relatively easy to isolate and typically survive longer than the disease-producing organisms, coliforms are a useful indicator of the possible presence of enteric pathogenic bacteria and viruses. In most cases, water that is free of total coliforms is considered free of disease-producing microorganisms.
